

Pre-Implementation Service Contract Testing

[Process Flow]

- This service is fee-based. Costs vary depending on the scope, number of samples, and measurement conditions. Orders will be placed after a quotation is provided.
- From sample arrival to report submission, it typically takes about 2 weeks. Depending on our workload, it may take longer than 2 weeks.

Q1. Are there any restrictions on measurement targets or the number of samples?

A. There are no particular restrictions; however, prior consultation may be required depending on the size, material, and measurement conditions.

We can accommodate anywhere from one to multiple samples, depending on your needs.

Q2. What preparations are made before measurement?

A. Before measurement, we calibrate the camera and then conduct the measurement after ensuring an accurate measurement environment.

Q3. In what format can we receive the measurement results?

A. We can deliver the results in the following formats:

- XYZ values / Lab values (numeric data)
- JPEG images (color images of the measurement area)
- Chromaticity map (visualization of color distribution)
- We can also provide other formats, such as CSV files and PDF reports.

Q4. Can we consult with you about the results?

A. Yes. Based on the report, we can provide proposals tailored to your application and support product selection as well.

Q5. Is this a paid service?

A. Yes. Contract testing is a paid service.

Fees vary depending on the test scope, number of samples, report format, etc., so please request a quotation.

Q6. How long does measurement take?

A. It depends on the measurement scope and number of samples, but typically it takes about 5–10 business days after receipt.

* For peak periods or special measurements, we will inform you separately.

[Related Services]

	Service Name	Description
Pre-Implementation Services	Trial Measurement	We perform trial measurements and provide a brief report.
	Rental Service	You can use a 2D colorimeter for a short period of time.
